FlexFix® Product Code DUP 9 In Stainless Steel

The longlive snap fastening system for maritime
and other technical applications

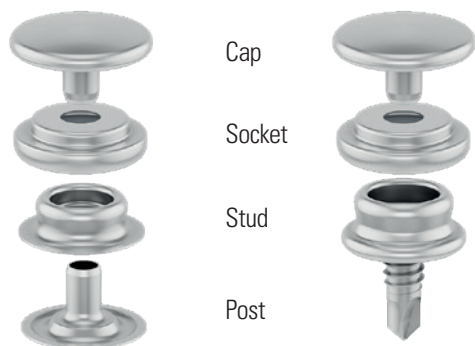

Boats, yachts and accessories are exposed to enormous weather influences, such as dirt and salt water. Weatherproof boat covers are usually fitted with standard snap fasteners, which are subject not only to corrosion but also to lateral forces caused by wind and waves. Over time, the fastener can become stiff or even unusable and may pose a safety risk.

The new FlexFix® in Stainless Steel from YKK STOCKO FASTENERS offers a solution to these issues, offering enhanced durability and resistance to corrosion. The special design of the socket with the proven technology used in the FlexFix® range replaces the metal spring part with a spring-elastic plastic. This innovative design can absorb lateral forces (shear force) particularly well, allowing for more tension on the entire snap fastening system without tilting.

Additionally, the new eyelet is compatible with identical systems, offering a convenient optimization for already installed stud components.

Besides the stud and post combination, a stud with an integrated stainless-steel screw is also available.

SYSTEM CONSTRUCTION

Alternatively with integrated stainless-steel screw

APPLICATION AREAS

- Boats, motorhomes, etc.
- Persennings
- Curtains and tarpaulins
- Life jackets
- Interior fittings

BENEFITS

- Corrosion-resistant due to stainless steel
- Resistant to salt water
- High absorption of shear forces
- Robust opening and closing behaviour
- High pressure resistance
- High long-term resistance - wear-resistant
- Thermostable
- Compatible with SNAD® and others
- Plastic inlay of the socket on request in different colours

SIZE

The socket is shown in its original size (ø 14.3 mm).

Colour example, inlay currently only available in the colour 'nature'.
